Update Java Security Exception List with https://

Customs Web Site is now updated with https:// mandatory instead of http://

You may need to add <https://www.customs.gov.tc> to your Java Security Exception List.

Should be able to find that by clicking Java icon in your control panel

If that does not solve the problem please also visit <https://www.customs.gov.tc> and click the Asycuda World LIVE Login button

Any jnlp file you may have saved on your computer desktop may no longer work.
